SBK RUBBER SLEEVES – THE SOLUTION FOR FLEXIBLE PIPES CONNECTIONS

Rubber sleeves are used, for example, for connecting fixed and moveable pipes in material locks, compensators, weighing equipment or flexible silo inflows.

Hot homogeneously vulcanised sleeves are also ideally suited for problematic pipe junctions. A special vulcanisation process ensures a smooth transition even in the connecting area and prevents thickening of the material. This guarantees dust-free conveying of even powdery materials.

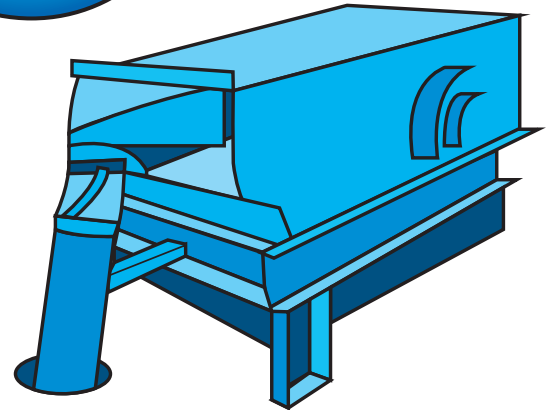

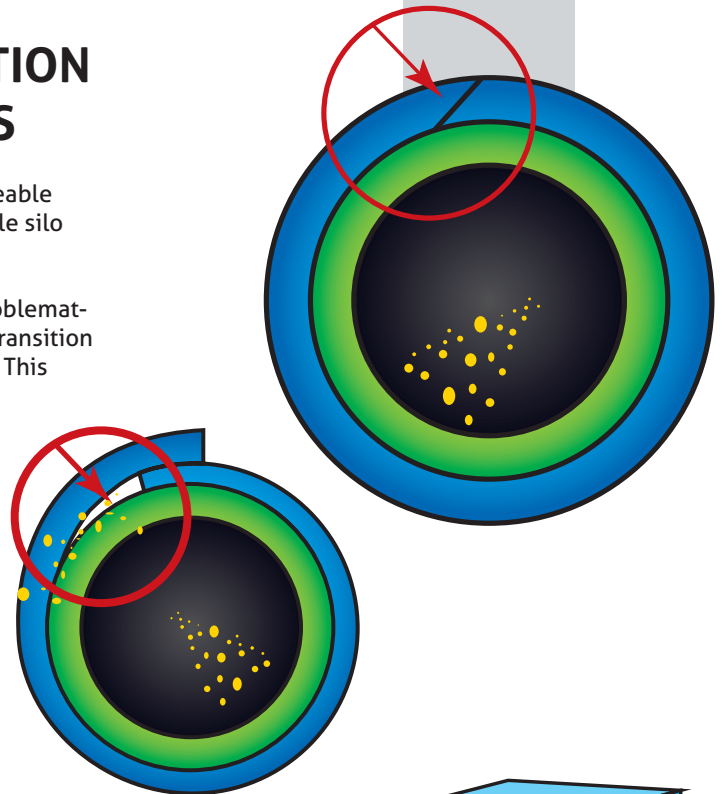

Areas of use for sleeves:

- Bagging machines
- Big bag filling
- Barrel filling
- Filling machines
- Packaging machines
- Filling containers

Our range of different elastomers such as:

- Para rubber
- Neoprene rubber
- Perbunan rubber
- EPDM rubber
- Silicone
- Viton

Ensures that we are able to offer a solution for almost any application.
